Earthquakes Answer Key - HelpTeaching.com

â€¢ Earthquakes cause waves, called seismic waves, to travel through Earth. Seismic waves carry the energy released by the rocks. There are three kinds of seismic waves: P waves, S waves, and surface waves. â€¢ P waves move rocks back and forth, like a wave passing through a spring toy when you push in the coils. P waves are the fastest seismic waves.

Seismic Waves and Earthâ€™s Interior PPT Name: Period: Date

Students should discover that the P wave propagates faster than an S wave. Answers: 1. Seismic waves are waves that propagate through Earthâ€™s interior. 2. Much of what we know about Earth comes from study of seismic waves and how they travel through different materials. Studying these waves helps us understand earthquakes and how to

wave amplitude can be used to estimate the event magnitude (Swaves are usually used for local records, P waves in the case of teleseisms). In global seismology, surface wave dispersion (arrival times varying as a function of frequency) can be used to constrain seismic velocity as a function of depth.

Introduction to Seismology: The wave equation and body waves

(slide 10) S-waves (or secondary waves) are another type of body wave, and as the name suggests, are the second fastest type of seismic wave, meaning an S-wave would be the second wave you would feel after an earthquake occurs.

Seismic Waves: How Earthquakes Move the Earth - Lesson

These waves of energy can be recorded on a seismograph, which produces a recording called a

seismogram. Seismographs record the two types of body waves: Primary waves (P-waves) and Secondary waves (S-waves). They also detect Surface waves called Love waves (L-waves) and Rayleigh waves (R-waves).
